2024 Field Manual

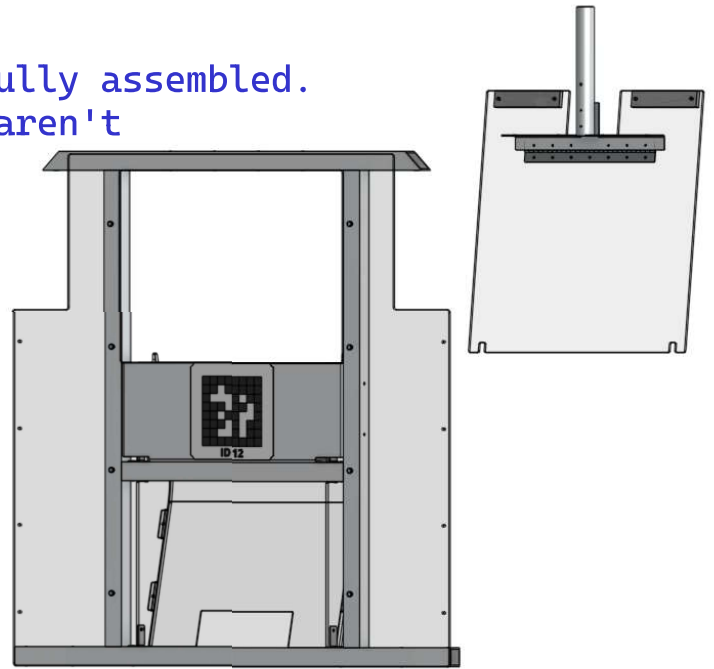

Case Packing: Case 32

FIM Offseason Edition!

v1.0

1. Case 32 is formally the practice field roadcase. Now it holds the extra source plastic and assembled stage/trap weldments.

As pictured, the weldment remains fully assembled. (including the cheeseborughs which aren't in the cad for some reason)
Just remove the 4 bolts holding the trap/microphone on. That assembly will go in case 23/24

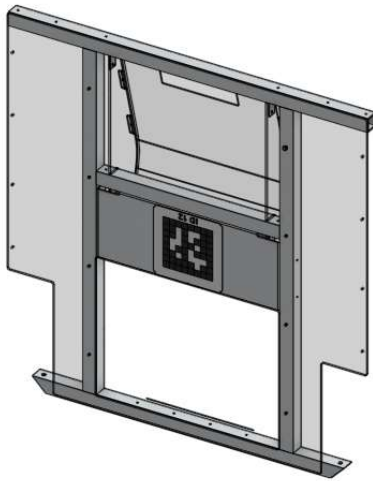

Start packing the case by putting in all the spare source plastic
And one of the stage assemblies with the front facing the source plastic

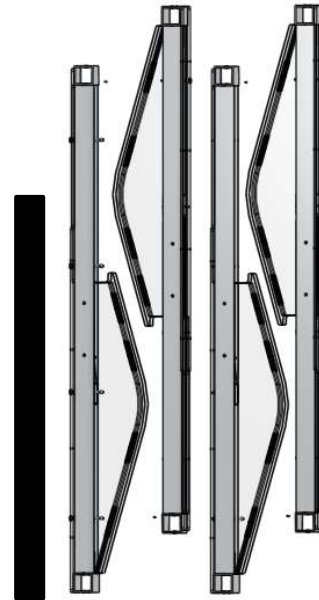

2. Insert another stage assembly in the same orientation

3. Insert a third and fourth stage assembly, upside down and backwards so the traps nest

Side view

Source plastic

One of the upside down stage assemblies will probably slide down because there's extra space.
This is ...frustrating aesthetically but not a problem

3. Put the last 2 stage assemblies in, the weldments will fit between the weldments of the other 4

4. The remainder of the space can be used for other stuff, like the flags from the speakers.
